# Axians AuthentiKit

The Network Identity Management kit that protects your network  
**with secure access** and **a smooth user experience.**

**Maximum protection, minimum complexity:**  
your network is safe with just one kit.

# Axians AuthentiKit enables **secure access** with **central management**, reducing the risk of intrusion.

The integration of **advanced technologies** provides **comprehensive protection** for complex enterprise networks, with automatic policy management.

## **Advanced system protection:**

Ensure maximum protection against unauthorized access with control and authentication for users and devices. Whether it's wired, wireless, or VPN connections, your network will always be safe.

## **Centralized Administrative Access Management:**

Optimize security with centralized administrative access management. Give each user only the access they need with granular permission control.

## **Uniform access policies:**

Implement centralized access rules based on user and device profiles, improving the security and efficiency of your network.

## **Complete access visibility:**

Proactively monitor and manage security with real-time and historical logs, ensuring a fast and informed response to security incidents.

## **Secure guest logins:**

Offer customizable options for guest logins, including self-service portals, splash pages, and BYOD support, ensuring a secure and convenient connection for your guests.

## **Integration with enterprise systems:**

Ensure comprehensive identity management with support for Active Directory, MDM, and PKI.

## **Agile connection management:**

Simplify secure access with credential-based automatic configuration of network ports, minimizing manual tasks and improving operational efficiency.

## **IoT/OT device segmentation:**

Improve the protection of your IoT/OT devices with connected device recognition and automatic segmentation.
